

Arkansas Medicaid Non-Emergency Transportation (NET) Data Book

Data shown within this document represents the Arkansas Department of Human Services, Division on Medical Services best effort of a true and accurate representation of each item as known to the department at the time of this RFPs publication. Trip data shown represents broker submitted trips that have been adjudicated by Medicaid's fiscal agent. Accuracy of the data presented relies on the current brokers' reporting.

Definitions:

Traditional Population (Pop 1) – Traditional Medicaid Non-Emergency Transportation eligible group.

Eligibility – Number of persons in the region eligible for NET Transportation.

Trip Legs – Count of historic trips. Trips are equal to each leg of a journey e.g. from the beneficiary's home to the doctor's office is one trip. Completing the journey with transportation from the doctor's office to the beneficiary's home results in a second trip.

Rides – The number of times a vehicle is sent to provide trip legs. In the example above where a beneficiary utilizes NET for transportation to the doctor's office and back to their home, two trip legs would be required and the entire voyage would equal one ride. If the beneficiary required an additional stop at a pharmacy or specialist the legs would equal three while the ride count would remain at one.

Mileage -The number of miles reported for all trips by month and county.

Newly Eligible Population (Pop 2 and Pop 3) –

Population 2 (Pop 2): Newly Eligible Adults who participate in a commercial insurance plan, Newly Eligible Adults awaiting determination of medical frailty, and Newly Eligible Adults eligible for Medicaid services in the period of time between enrollment and the start date of their commercial insurance plan.

Population 3 (Pop 3): Newly Eligible Adults who have been deemed medically frail.

Eligibility – Number of persons in the region eligible for NET Transportation.

Trip Legs – Count of historic trips. Trips are equal to each leg of a journey e.g. from the beneficiary's home to the doctor's office is one trip. Completing the journey with transportation from the doctor's office to the beneficiary's home results in a second trip.

Rides – The number of times a vehicle is sent to provide trip legs. In the example above where a beneficiary utilizes NET for transportation to the doctor's office and back to their home, two trip legs would be required and the entire voyage would equal one ride. If the beneficiary required an additional stop at a pharmacy or specialist the legs would equal three while the ride count would remain at one.

Mileage -The number of loaded miles reported for all trips by month and county.

Fuel adjustment – Displays dates fuel prices will be viewed to determine the fuel adjustment factor that will influence NET payments.
